

IN THE ABSTRACT:

Please substitute the originally filed Abstract with the Abstract, which is provided on a separate sheet, as follows:

ABSTRACT OF THE DISCLOSURE

[0091] A linerless ink-jet recording adhesive label can be provided which has a suitability for ink-jet recording without requiring a release paper. The adhesive label is excellent in adhesive and peeling properties, without causing the increase of peel force even over time. The linerless ink-jet recording adhesive label can contain an ink-jet recording sheet as a substrate, a release agent layer provided on the front surface of the substrate, and an adhesive layer provided on the rear surface of the substrate. The release agent composing the release agent layer can contain at least one polymer of a polyvinyl alcohol containing a long-chain alkyl group, an amino-alkyd resin containing a long-chain alkyl group, and/or a polyethylenimine containing a long-chain alkyl group. The adhesive layer can be formed by an adhesive containing fine spheres.
